

## **Design Thinking Project-reflection**

The project about design thinking taught me a lot. It made me see how crucial it is to concentrate on what people actually needs. Thinking creatively and solving problems clearly were essential. Creating basic models improved our ability to see and comprehend the project. It was also essential to keep monitoring and adjusting. Using the Green Bin's using advance technology such as sensors and a user-friendly app which help improve society and the environment. Overall, the project taught me how to use design thinking, enhance existing procedures and collaborate effectively with others.

Even though our project was good, there's always room to make things better. Next time, we can talk to even more types of people to get different ideas. During our creative phase, we can try thinking of even crazier ideas to see what might work. It would be great to get feedback from people who might use our solution early on. Also, we should think about how we can make our models in a way that's good for the environment.

The design thinking project was super interesting. I figured out that it's really important to think about what people actually need. I also learned how to solve problems in a clear and creative way. The cool part was using fancy technology in the Green Bin. It showed me how design thinking can help the environment and society. Overall, the project taught me how to make things better, work together, and use design thinking in real life.
