

Assignment 3-reflection

In the industrial talk 2, I received a talk from Credence which is a company powered by Telekom Malaysia (TM). The talk broadened my understanding of system development, specifically focusing on analytics and cloud services. Learning about technologies like PostgreSQL, ClickHouse, and Druid, as well as tools such as Tableau and PowerBI, expanded my knowledge of industry-standard tools.

I hope that the speaker could enhance the learning experience by delving deeper into specific projects or case studies involving the discussed technologies. Additionally, having a Q&A section where the speaker describes the challenges faced by Credence and how they were overcome would add practical context.

In summary, the talk by the Credence company was successful as it inspired me to apply this knowledge in my academic and professional pursuits. It provided valuable insights into system development and the functions of machine languages, such as the integration of SQL and Python.
